ExamEndo

Patient Name: David Ross
Procedure Date: 12/16/2019 9:02 AM
MRN: 3675208
Account Number: 34802144
Date of Birth: 4/10/1952
Admit Type: Ambulatory
Age: 67
Room: BGI
Gender: Male
Note Status: Finalized
Attending MD: Michael V Chiorean ,
Procedure: Upper GI endoscopy
Indications: Epigastric abdominal pain, Iron deficiency anemia,
Suspected esophageal reflux, recently off PPI.
Providers: Michael V. Chiorean
Referring MD: Helen Wanhua Shih Md
Requesting Provider:
Medicines: Fentanyl IVP 125 mcgs, Versed IVP 6 mgs
Complications: No immediate complications.
Estimated Blood Loss: Estimated blood loss: none.
Procedure: The risks and benefits were discussed; potential complications include bleeding, perforation, infection, sedation, complications, and the possibility of a missed lesion. A preprocedural pause was taken prior to sedation. After I obtained informed consent, the scope was passed under direct vision. Throughout the

procedure, the patient's blood pressure, pulse, and oxygen saturations were monitored continuously. Medications, oxygen and IV fluids were titrated and administered per my order. The GIF H180 scope was introduced through the mouth, and advanced to the fourth part of duodenum. The upper GI endoscopy was accomplished without difficulty. The patient tolerated the procedure well.

Findings:

The esophagus was normal.

The Z-line was regular and was found 40 cm from the incisors.

The stomach was normal.

The examined duodenum was normal. Biopsies were taken with a cold forceps for histology.

Impression: - Normal esophagus.

- Z-line regular, 40 cm from the incisors.

- Normal stomach.

- Normal examined duodenum. Biopsied.

Recommendation: - Await pathology results.

- resume PPI when symptomatic. Otherwise observation alone is adequate.

- Return to referring physician.
